

Asset Management

www.ebaker.ca

Main Features

Tracks tangible capital assets

Amortization using half year rule

Upcoming asset replacement report

Track machinery maintenance and repairs

Upcoming and overdue maintenance report

Use the same list of vehicles from the Machinery system

Print a Service History list for each machine

Keep track of items and tools that have been issued to employees

The primary use of this system is to track tangible capital assets. Integrated with our General Ledger, the half year rule amortization is made simple. You can also use the budgetary Upcoming report.

Similar to the Machinery Control system, this Asset Management system also keeps track of vehicles owned as well as their upcoming service and service history. Company cars and trucks get their service tracked in the Asset Management system. But even smaller assets need to be tracked. Other items, like credit cards, tape measures, pagers, badges, digital cameras, office keys, etc. need to be returned when the employee leaves. This system lets you track all that and more.
